

ISA'S 2020 INNOVATION IMPACT AWARD WINNER

Snap-on Industrial is very proud to accept ISA's 2020 Innovation Impact Award.

The Snap-on Level 5 Automated Tool Control, or ATC, system exemplifies Snap-on's commitment to developing innovative solutions that make industrial work more productive for its customers. Level 5 ATC makes controlling tool assets more reliable, regulatory compliance more precise, and industrial process improvements more achievable based on its comprehensive and customizable reporting and inventory tracking capabilities.

Snap-on Industrial is proud of the impact its innovative Level 5 ATC system has across the range of industries it serves. Level 5 is found in aviation production facilities in the United States to maintenance and repair hangars in the Middle East and the Pacific Rim; in fast train repair depots and power generation facilities across Europe, at mining sites in South America, and in military facilities around the world.

Understanding industrial work and customizing innovative Level 5 ATC solutions for the range of industries we serve around the globe is the future of Snap-on Industrial.

– Bart Wingall, President, Snap-on Industrial

SNAP-ON AND INNOVATION:

Snap-on's commitment to innovation is driven by a passion for knowing and understanding its customers, and observing their work first-hand. It is by forging the closest of connections with its customers that insights are gained and translated into innovative new products.

It was in 1920, 100 years ago, that Snap-on's founder Joe Johnson, observing the work of America's burgeoning automotive aftercare market, took five unique handles and ten sockets that snapped on interchangeably, coined the slogan "Five do the Work of Fifty" and launched a company that would shape an industry.

Since then, the close relationship between Snap-on and its customers has fueled a string of productivity solutions that make work easier for serious professionals.
